Not all pack sizes may be marketed.

For any information about this veterinary medicinal product, please contact the local representative of the marketing authorisation holder.

Additional information:

Ichthammol is a naturally occurring mixture composed of many different single substances with anti-inflammatory, analgesic, antipruritic, circulation enhancing, antiseptic and resorption supporting properties.

Camphor supports the circulation enhancing effect and stimulates the formation of granulation tissue. The keratolytic activity facilitates a fast and deep tissue penetration, and therefore a potent effect on the inflamed tissue.

The active substances contained in Phlegmovet lead to a stimulation of skin blood circulation, remission of swelling and effusion of soft tissues as well as of symptoms of inflammation and to alleviation of pain.

In purulent skin disorders liquefaction of the focus of disease and discharge of the pus is enhanced even in advanced stages of inflammation.
